

Topcon Retinal Imaging

Our office is proud to provide our patients with the most highly advanced technology available in retinal screening today! Our ability to view your internal retinal health is now dramatically improved with the Topcon Retinal Imaging Camera. For an additional charge we will take photographs of the back of your eyes and evaluate the overall health of the retina and optic nerve.

Our doctors are concerned about retinal problems such as macular degeneration, glaucoma, retinal holes, retinal detachments and diabetic retinopathy (all of which can lead to partial loss of vision or blindness.)

EARLY DETECTION IS CRUCIAL

The Topcon Retinal Imaging Camera Provides:

- A digital computerized map of the retina
- An in depth view of the retinal layers (where disease can start)
- The ability to show you your images today during the exam

A permanent record for your medical file (year to year comparisons for tracking and diagnosing your potential eye diseases)

Topcon Retinal Imaging Camera:

- It is fast, easy, and comfortable. Actual scanning time is only a quarter of one second.
- It **WILL NOT** require dilating drops (which result in temporary blurred vision and sensitivity to light)

We encourage all of our patients to have retinal exam annually.

___ I elect to have a retinal image of my retinas

Patients Signature _____ Date _____

If you decline the retinal exam, you are limiting our ability to accurately document the health of your eye and must sign below.
